The number of search results in the table is not reset

📎 Attach | ☑ Create subtask | 🔗 Add a link to a task | ⌄ | ⋯

Description
Description:

Resetting search filters in a table does not reset the number of previous search results

Preconditions:

1.URL must be open:

■ Metadata Challenge

Steps to reproduce:

1. Go to the last page of search results below the table

2. Remove all "Select All" filters in the "All items are selected/Select some items" section

3. Pay attention to the current number of results found

Expected result:

The table is empty. Search results are 0

Actual result:

The table is empty. Search results are not reset and are equal to the values of the previous search

Registration form fields are shifted relative to each other

📎 Attach   ☑ Create subtask   🔗 Add a link to a task   ⌄   •••

Description
Description:

Fields for entering data during registration are shifted relative to each other

Preconditions:

1.URL must be open:

🏁 Metadata Challenge

Steps to reproduce:

1. Check that the current registration form complies with the requirements for this form in the specification.

2. Pay attention to the location of the text "Indicates required field"

3. Pay attention to the location of the fields "Last Name" and "Street Address"

4. Pay attention to the location of the fields "State" and "Other media of contact:"

5. Pay attention checkboxes "Facebook" "Linkedin" "Twitter" "Others"

6. Pay attention to the location of the fields "Your total monthly advertising budget (approximately)" and "Your monthly advertising budget on social (approximately)"

Expected result:

Registration form meets specification

Actual result:

Registration form fields look shifted relative to each other

Calendar supports non-valid input values

📎 Attach   ☑ Create subtask   🔗 Add a link to a task   ⌄   •••

Description
Description:

The calendar supports six-digit values - the "Year" section in the "Filter by startDate" and "Filter by endDate" input fields

Preconditions:

1.URL must be open:

🔲 Metadata Challenge

Steps to reproduce:

1. Enter an invalid numeric value in the "Filter by startDate" input field
2. Press Enter
3. Enter an invalid numeric value in the "Filter by endtDate" input field
4. Press Enter

Expected result:

The calendar only supports valid input values. For example: 2022-05-09

Actual result:

The calendar supports non-valid input values. For example: 202222-05-09

Table column header changes name

📎 Attach   ☑ Create subtask   🔗 Add a link to a task   ⌄   •••

Description
Description:

Table column headings change ending when sorting from descending to ascending

Preconditions:

1.URL must be open:

⬛ Metadata Challenge

Steps to reproduce:

1.Click on the heading of each column of the table

Expected result:

The column name remains unchanged (it is possible to add arrows 🔼 🔽 - you need to look at the specification) The sorting is changed from descending to ascending

Actual result:

The end of the column name is changed. Sorting in descending to ascending order

The "Search" field does not perform a search function in the dropdown

📎 Attach   🗹 Create subtask   🔗 Add a link to a task   ⌄   •••

Description
Description:

The "Search" field does not perform a search function in the "Select some items" section. "Search" duplicates the Checkbox function. "Search" does not allow you to enter values through a "space" - only together. Entering an input option name does not exclude the remaining options from the list.

Preconditions:

1.URL must be open:

🔲 Metadata Challenge

Steps to reproduce:

1. Click on the drop-down list "Select some items"
2. Enter valid values in the "Search" field

Expected result:

Search makes a choice between dropdown options

Actual result:

"Search" duplicates the Checkbox function. "Search" does not allow you to enter values through a "space" - only together. Entering an input option name does not exclude the remaining options from the list.
